

Verify mobile self-checkout purchases.

SelfPay Staff verifies purchases made in-app and ensures items leaving the store have been paid for.

Simple, uncomplicated process.

Our patented solution is delivered via a staff-facing mobile app. Staff members simply scan a barcode from the shopper's digital receipt. SelfPay Staff retrieves the shopper's purchase details such as their name, cart, item images and time of purchase for display on the staff member's mobile device. After a quick look at the physical cart, the staff member verifies the purchase in-app. If the shopper needs to return an item, refunds can be performed directly from the SelfPay Staff app as well.

Powerful loss prevention.

SelfPay Staff has capabilities to notify the staff member if a receipt is valid, if it has been used more than once, if a purchase was made some time before verification and who verified the receipt. With this added information on each mobile self-checkout purchase, staff members can better apply loss prevention policies. Unique staff member accounts allow management to easily control user permissions and create an audit trail.

Fits in with your mobile strategy.

SelfPay Staff has been helping merchants verify mobile purchases since 2013. With industry-leading technology, SelfPay Staff runs parallel to the merchant's existing shopper mobile self-checkout app and is deployable as a stand-alone product branded to each merchant.
